

MIRROR

Deborah Lee
Environments 1, Fall 2015

the problem(s)

Group dynamics can become stressful when one or more person cannot make it to a meeting (in studio)

Professors (and group members) can become offended when others are slightly late

Some people can't make it to studio at all

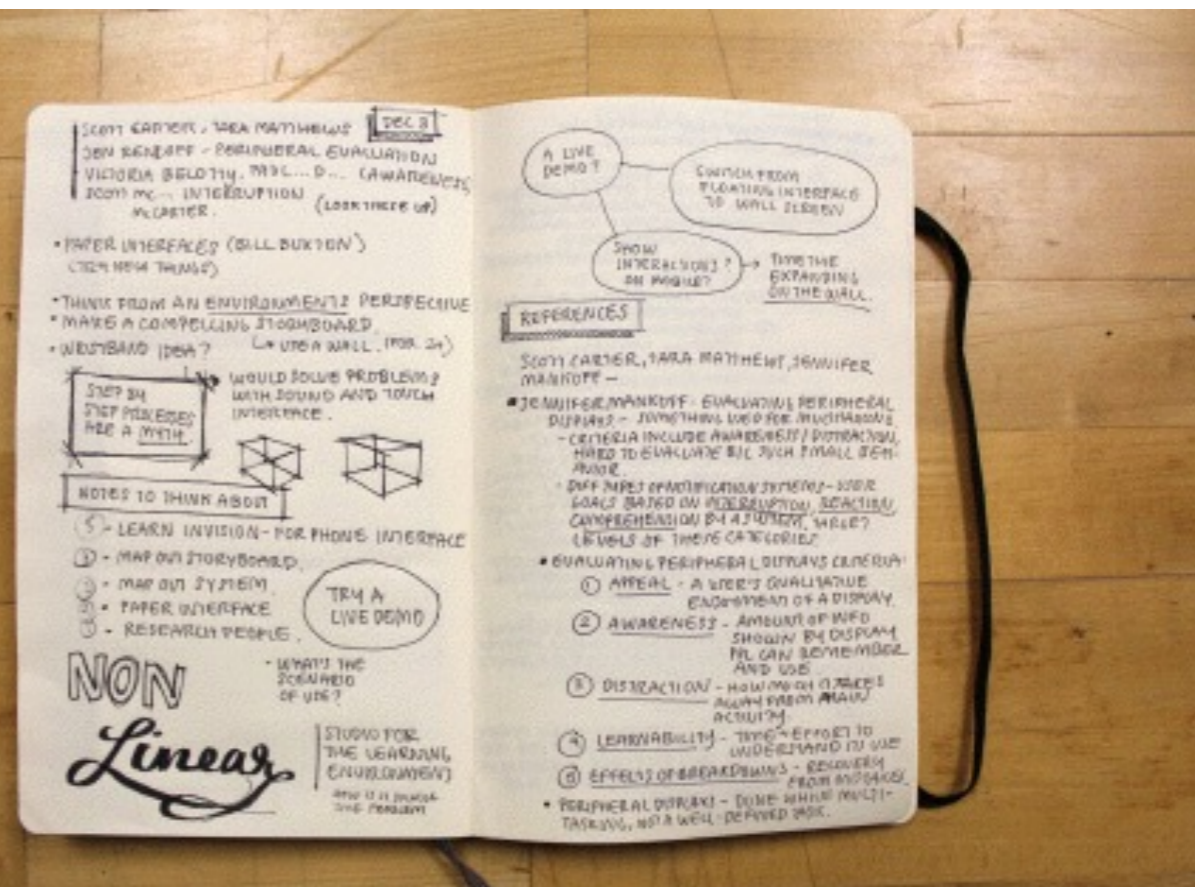

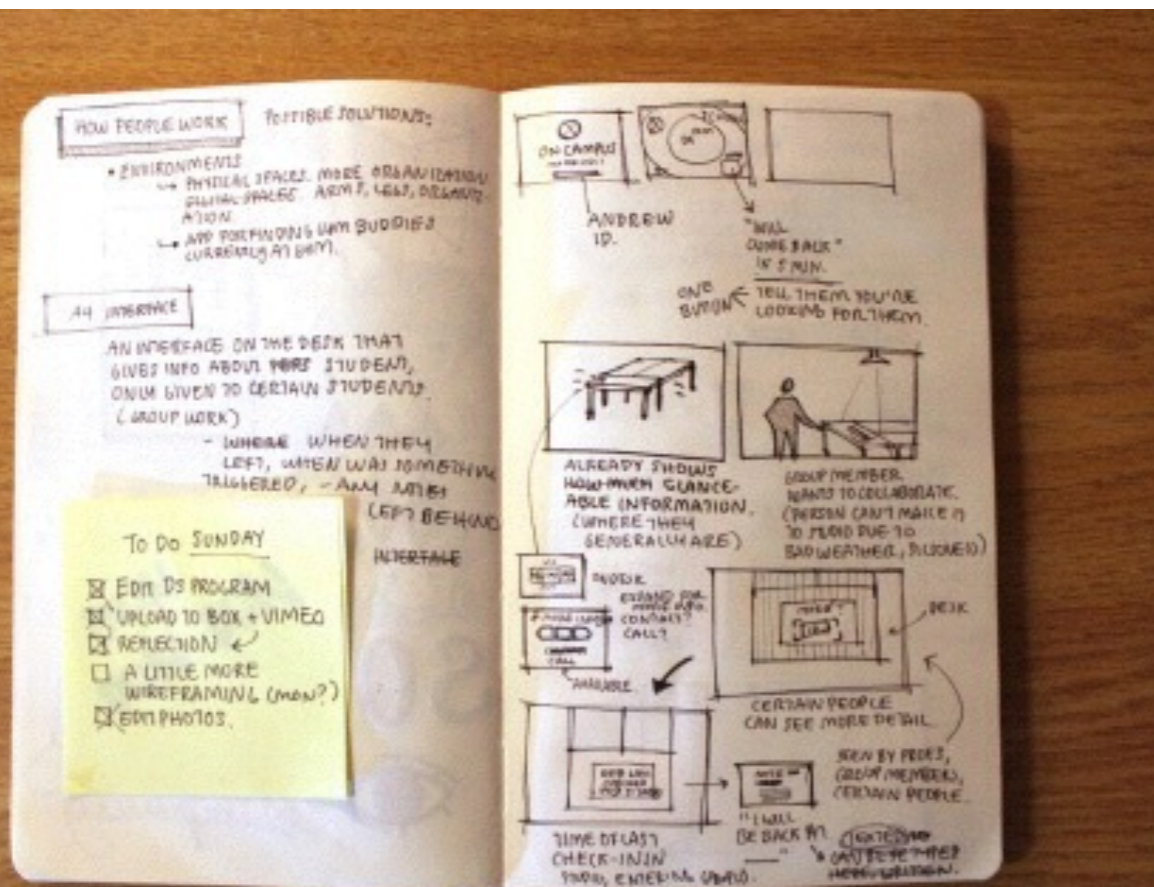

Video

solution: mirror

focused mostly on the collaboration aspect

a glanceable interface that only appears when student is absent

can be used for group work and access of process files/notes

solution: mirror

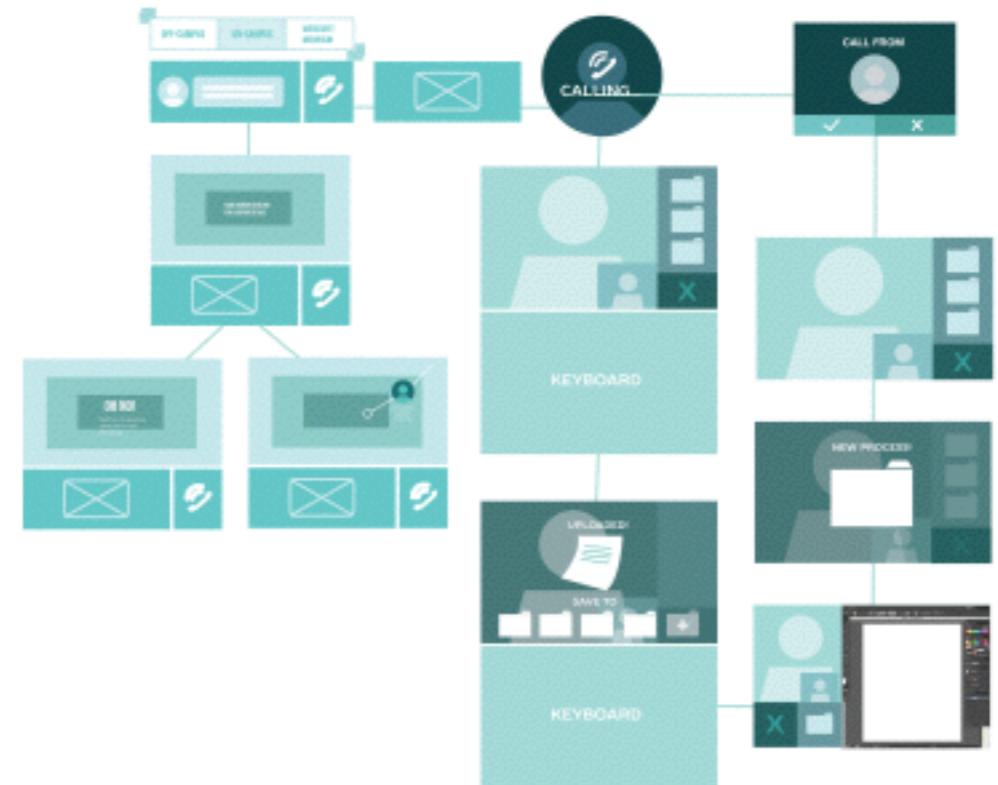

Ideas considered but removed:

desktop keyboard-unimplemented due to lack of feedback

controlling screen with gestures-there was no good reason for it

more detailed locations-complications with privacy settings.

Tried to make interactions as simple as possible—it should be about the studio as a learning environment, so some of the interfaces and interactions shouldn't be so in-the-way.

future implementations

How to extend this more for of an attendance format?

Collaborations between those in different places?
(ie, different schools, cities, countries)

A wider system: can more different parts of the studio represent various functions of the platform? (viewing documents vs editing)
